

Introducing Rotolight

The World's Most
Advanced LED Floodlight

Magic Eye Technology

 **Bi-Colour LED System**

Accurately reproduces any colour of white light from candlelight through to full daylight in 10 degree Kelvin steps, with Real-Time colour display.

Magic Eye App

Uses iPhone/iPad App to accurately sample both colour temperature and intensity, & wirelessly transmit and recall settings across the world to ANOVA, with DMX-style Fader Control.

WiFi & DMX

Includes built-in WiFi and wired DMX allowing wireless remote control of brightness, colour temperature, and system settings via iPhone or iPad.

 **110 Degree Beam Angle**

Unique super-wide spread eliminates hard shadows and hotspots with gorgeous soft light output and signature "Ringlight" effect.

EcoFlood Technology

ANOVA's 1000w equivalent output uses 93% less energy than a standard Tungsten bulb with virtually no heat, and includes a V-lock plate for battery operation as standard

Tessalating design

ANOVA's unique shape allows users to create a huge honeycomb array of Anovas for larger projects (using T-Plate Connectors and custom Yokes).

Bi-COLOUR - ECOFLOOD - WiFi - DMX - MAGIC EYE™
